INDIVIDUAL AND CENTRAL MANAGEMENT OF FAUCETS

APP & CNX

Hygiene requirements are increasing all the time, particularly in public, semi-public, commercial and industrial buildings – both nationally and internationally. We continually optimise our shower systems to meet these needs. Our comprehensive CONTI+ hygiene concept guarantees maximum safety in shower rooms and washrooms – for every application area. We consider the following innovative technologies and hygiene features in advance for our products:

CONTI+ HYGIENE FEATURES

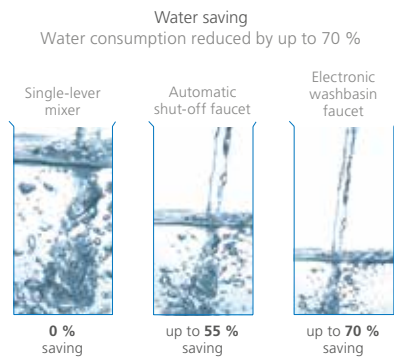

- CONTI+ hygiene concept (PREVENTIVE | PERMANENT | ACUTE)
- Drinking water hygiene (3 phases for prevention, compliance and remediation)
- Saving water and energy costs
- Materials suitable for drinking water
- Non-porous and easy-to-clean surfaces
- Touchless operation
- Automatic non-contact closing function
- Keeping drinking water installations germ-free
- Retention of germs at tapping points
- Low aerosol
- Easy maintenance
- Cold water flushing, electronic
- Hygienic flushing, electronic
- Thermal disinfection, electronic, manual and with additional safety via key switch
- Documented operating and hygiene functions

CONTI+ ADAPTIVE
MULTIFUNCTIONAL
WATER PATH –
one solution –
wide-ranging fields
of application,
maximum installation
comfort and extensive
functionality transfer.

for showers, faucets, urinal flush valves & kitchen (electronic)

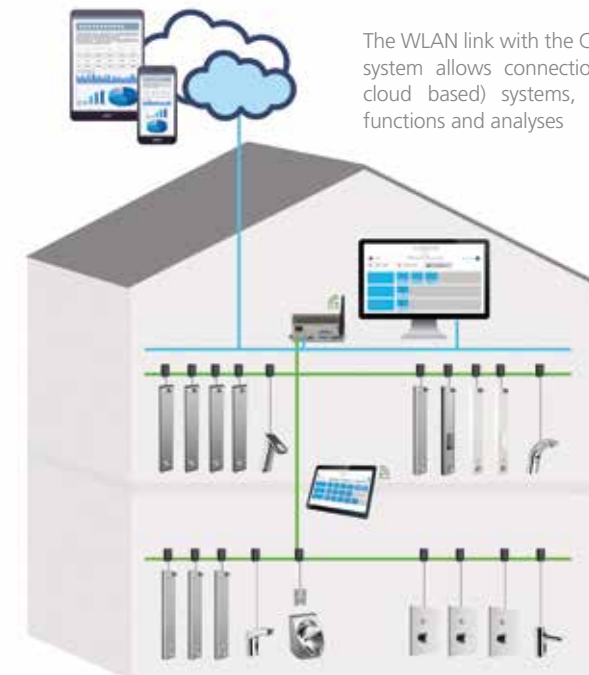

to meet the most demanding hygiene requirements

CONTI+ has a long history of developing smart solutions for central management, control and monitoring of devices and components for shower systems.

From individual faucets to complete systems with up to 150 CONTI+ faucets, our intelligent technologies allow very easy and reliable management of all operating, documentation and safety functions, such as convenient automation of rinses, setting operating periods for thermal disinfection and setting operation stops or cleaning stops. This ensures more comfort and outstanding hygiene.

The WLAN link with the CNX water management system allows connection to higher-level (e.g. cloud based) systems, as well as additional functions and analyses
